PROJECT #2:

Project Name   : **User Portal**
Organization   : Redmorph
Platform   : Linux
Environment   : Core Java, spring-boot, Hibernate 5.
WebTechnologies   : Angular 5, Bootstrap, HTML, CSS, RXJS.
Server   : Tomcat 7.0.
IDE   : Spring Tool Suite(STS).
Database   : MySQL.
Team Size   : 03.

Description:

It is a Role based application. We have three types of roles those are ADMIN, DISTRIBUTOR, RESELLER .The main objective of this project is providing Activation codes to users. Distributor has permission to create activation codes. Reseller can order activation codes to his distributor. Admin has all permission to observe all operations

done by distributor and reseller.

Contribution

Involved in implementing role based authorization, and Login , reset password, Forgot password.
Implemented modules like order management, Randomly generated activation codes based requirements.

PROJECT #3:

Project Name	: **Enterprise Portal**
Organization	: Redmorph
Platform	: Linux
Environment	: Java,spring-boot,Hibernate 5.0,
WebTechnologies	: Angular 7, Bootstrap, HTML, CSS, RXJS.
Server	: Tomcat 6.0
Database	: MySql.
Team Size	: 05.

Description:
Enterprise portal is platform for mobile devices. The main objective of this project is collecting data from mobiles in a particular period of time. And this project is a multi-tenancy project. The collection of data about DEVICE APPLCATIONS, DEVICE APP PERMISSIONS, DEVICE ANTI-MALWARE, DEVICE INFORMATION. These information we are showing in dashboard and various modules in Enterprise portal .This portal have several roles like OWNER, ADMIN, ENGINEER, ANALYST, END USER. END USER role is user for this portal. The Project flow we can understand with the below steps.
1. End user mobile should be ENROLL to enterprise portal.
2. After Enrolling In mobile device enterprise app collects data from device and send to platform portal.
3. Based roles and authorization owner can view the information about device and he can control that device from platform portal (Enterprise portal).

Contribution

Involved in implementing role based authorization, and Login, reset password, Forgot password.
Implemented modules like Enrollments, user management.

PROJECT #4:

Project Name	: **UCW Dashboard**
Organization	: Enlume Technologies pvt ltd
Platform	: windows
Environment	: Java,spring-boot,JPA,
WebTechnologies	: Angular 7, Bootstrap, HTML, CSS, RXJS.
Server	: Tomcat 9.0
Database	: Oracle
Team Size	: 05.

Description:
UCW dashboard is a health insurance project, this application involves with the several claims processing. The main objective of this application is to Recall and Release the claims. We are maintaining audit for each operation in this application. Implemented several charts to view the claims processing flow in dashboard. Few

functionalities we can achieve with this web application listed below.
- Recall Claim
- Release Claim
- Claim Search
- Manage Queues
- User Audit

Contribution

Involved in implementing Recall and Release Claim audit, Claim search implementation, Exporting Data into excel in all functionalities, Implemented charts to view claims processing.
